JURY TRIAL DEMANDED

STATE OF NEW YORK)
)ss
COUNTY OF ALBANY)

AFFIDAVIT OF ECKARDT JOHANNING, M.D., M.Sc.

BEFORE ME, the undersigned authority, a Notary Public in and for the County and State
aforesaid, personally appeared Eckardt Johanning, M.D., M.Sc., known to me (or satisfactorily
proven) to be the person whose name is subscribed, and having been duly sworn, deposes and
states under oath as follows:

1. I am above the age of 18, of sound mind and capable of executing this Affidavit.
2. My curriculum vitae establishing my competency as an expert is attached as
exhibit 1.
3. The facts and opinions contained in my reports are based on my personal

knowledge and experience and are attached as exhibit 2.

CURRICULUM VITAE

Dr. med. Eckardt Johanning, M.D., M.Sc.

Address: Occupational and Environmental Life Science - Fungal Research Group
(FRG), Inc., 650 Warren Street, Albany, N.Y. 12203
eckardtjohanning@attglobal.net

Present Appointment: Private Practice, Medical Director, Fungal Research Group, Inc.,
Adjunct Instructor, Dep. Community Medicine, Mount Sinai School of
Medicine, New York City

Previous Position: 1993-2000 Medical Director, Eastern New York Occupational and
Environmental Health Center, Albany, N.Y.
1990-1993 Attending physician, Irving J. Selikoff Occupational Health
Clinic Center, Mount Sinai Medical Center, New York, Instructor Dep.
Community Medicine. Mount Sinai School of Medicine, New York

Education: 1964-1973 Georg Büchner Schule, Darmstadt, Abitur, Major in
Mathematics/Natural Science
1978-1984 J.W. Goethe University, Frankfurt: Study of Human Medicine
and
Sociology
Medical Doctor (Arzt), October 1984

Scholarships "Villigst" scholarship for highly gifted students (1978-1984)
DAAD, ZENAF: US Research Scholarship 1982

Postdoctoral 1985-1988 State University of New York Training. Health Science Center
of Brooklyn, New York, Residency training in Family Practice
1988-1990 Mount Sinai Medical School - City University of New York,
Residency in Occupational and Environmental Medicine - Community
Medicine

Degrees/Certifications:

Diplomat of the American Board of Family Practice (1988, recertified
1995, 2002)
Master in Community Science, 1990
Diplomat of the American Board of Preventive Medicine, Occupational
Medicine, 1991

Dissertation (Ph.D), 1991 - J. W. Goethe University, Frankfurt, FR
Germany:
Whole body vibration and back disorders. - magna cum laude -

Licensure	N.Y.S. License No. 175278-1, DEA: BJ 1914363
Professional Societies	American College of Occupational and Environmental Medicine American Academy of Family Physicians American Public Health Association International Commission in Occupational Health, (ICOH) (Committees: Organic Dust, Vibration)
Reviewer/Consultant:	American Journal of Industrial Medicine International Journal of Occupational and Environmental Health National Sciences and Engineering Research Council of Canada Journal for Sound and Vibration
Other/Miscellaneous:	Listed among the "A Indoor Environment Power 50" in the US by Indoor Environment Review (August 1997, 1998). Advisor to the Center for Disease Control and Prevention, Atlanta, Ga. (Toxic mold infant investigation) Advisor to Ontario Ministry of Health, Canada; participant of expert panel on toxigenic mold contamination indoors (2/99) Consultant to the World Health Organization (WHO), Geneva, Suisse, (Bioaerosols) (2001/2) Founder and principle organizer of the International Saratoga Springs, New York - Bioaerosols, Fungi and Bacteria, Mycotoxins Conferences (1994, 1996, 1998, 2000 in Helsinki, Finland (together with Healthy Buildings 2000)) which brought together a wide range of leading international researchers and health specialists devoted to public health and prevention. Interviews/quotations by national broadcasting companies (ABC, NBC, CBS, CBC) and newspapers (NYT, USA-Today, Wall-Street Journal, etc.)
Awards:	Public Service Award, Indoor Environment 1998; IAQ Publication, Inc. Prof. B. Gedek - Mycotoxin Scientific Research Award, May 2002, The German Mycotoxin Research Association, Berlin, Germany.
Grant Support:	-Occupational Health Clinic (Eastern New York Occupational and Environmental Health Center - Kaiser Permanente - Community Health Plan, Albany, N.Y.) New York State - DOH, BOH 96-2 (1997-2002) -Assessment of respiratory exposure hazards in composting. CDC Announcement #738 (NIOSH, Morgantown, WV) -Study of back disorders related to whole-body vibration and ergonomic hazards in locomotive engineers and conductors (supported by Brotherhood of Locomotive Engineers Legislative Board, N.Y.; Volpe Center; U.S. DOT)

RE: Jack P. Marrone
11673 Highway PT
Dixon, MO 65459
Date of Birth 2/22/46

I reviewed again the visit of Jack Marrone from January 17, 2002. This is a summary of the findings. I reviewed all provided outside medical reports and environmental findings, including the Advanced Applied Science report from October, 15, 2000.

Mr. Marrone, age 55, is a VA vet, with 100% disability since 1993 secondary to a gunshot wound, posttraumatic stress syndrome, and chloracne problems. He reported that after moving into and after doing some clean-up work inside the house on 354 Timber Rd, Mount Gretna, Pa, he developed a variety of problems including shortness of breath, eye irritation, chest tightness, wheezing, coughing, excessive fatigue, and nasal problems. He has been sneezing as well. He also developed an increased sensitivity and intolerance to gases, fumes, and a variety of air contaminants. He reports that his chloracne problem had been getting worse, and that he generally would look different. He reported that the special acne soap has not been helpful for him as in the past. He reported that he had not been seen at the time by his VA doctor and he had no special breathing test or chest x-ray test done. He left his home secondary to health concerns and findings of mold and moisture problems in his previous house. Since leaving this house, he felt much better. He stated that his breathing and fatigue had improved. He has less headaches.

Medications:

Trazodone.

Past Medical History:

Benign prostrate hypertrophy, exposure to Agent Orange resulting in chloracne development, posttraumatic stress syndrome, and gunshot wound. He had episodes of stomach cramps in the past. He denied any other significant abnormalities.

Past Surgical History:

Jack P. Marrone

2

October 21, 2002

Scrotal cyst surgery in 1976.

Social History:

He is a smoker starting at age 16, 1-1½ pack per day. He denied any alcohol or significant drug history.

He reported that he now has been living in Missouri, and that he feels much better there. In his current home there are no known environmental problems.

Physical Examination:

Blood pressure: 120/90 mmHg. Respiratory rate 12/min. Temperature 97 T. Height: 5'9". Weight: 201 pounds. His peak flow was found at 440.

Examination of head, ears, nose, throat, chest, abdomen, lungs, and extremities was overall unremarkable. The nasal passage showed increased erythema and were narrow.

Laboratory Tests:

On laboratory examination, he showed no reaction to specific IgE allergens; however, he had a marked reaction indicating significant organic dust exposure including to a variety of tested fungi, i.e., *Micropolyspora faeni*, *Aspergillus fumigatus*, *Aureobasidium pullulans*, *Penicillium notatum*, and *Trichoderma viride*. He also had elevated IgG and IgA response to *Stachybotrys chartarum*. These tests are used as exposure markers and do not necessarily correspond with disease activity.

Pulmonary function test from September 12, 2002 showed that he had overall normal lung function. Chest x-ray was negative.

Immunological test which included IgG subclasses and lymphocyte enumeration test and function test showed a slightly lower than normal absolute CD3 or matured T-lymphocyte cell count with 1462, normal 1507-1953. The remainder of the testing was normal. These findings are non-specific, but typical after intense fungal exposure.

I reviewed medical records provided to me by various providers. These records did not produce any additional information. He has been diagnosed in the past with prostatitis, hemorrhoids, stable COPD, and prostatitis problems.

The environmental investigation and report by Mr. R. Pfromm indicated the presence of moisture related fungi and defects inside the house, in particular in the basement. Fungi included species of *Aspergillus*, *Penicillium* and *Stachybotrys*, that were higher inside the house than outside (control). Photos were also provided confirming visible contamination.

Jack P. Marrone

3

October 21, 2002

Conclusion:

Based on recent findings, I conclude that Mr. Marrone had a respiratory reaction after intense exposure to mold and mildew in his home, which was probably also aggravated by doing some repair and clean-up work in the moldy house. He has been diagnosed in addition to his previous medical conditions with upper and lower airway inflammation and irritation effects (Rhinosinusitis, bronchitis) and mold allergy. With a reasonable degree of medical certainty I believe this was the result of the exposure in the described contaminated house. He has been advised that in the future he should avoid any of these problems since he has clearly been sensitized. Provided that he has no further exposure to the fungi, he should be reasonably well.

Sincerely,

A handwritten signature in black ink, appearing to read 'E. Johanning', with a stylized flourish at the end.

Dixon, MO 65459
Date of Birth 12/22/56

I reviewed again the visit of Karen Marrone from January 17, 2002. She came accompanied by her husband and daughter Vida, who also were examined that day. This is a summary of the findings. I reviewed all provided outside medical reports and environmental findings, including the Advanced Applied Science report from October, 15, 2000.

Mrs. Marrone, age 45 years, has a known service related disability since 1976. She has been previously diagnosed with multiple sclerosis in 1977. She reported that after moving into the house on 354 Timber Rd, Mount Gretna, Pa, she developed a variety of problems including shortness of breath, chest tightness, coughing, excessive fatigue, and nasal problems, stomach cramps. She had been diagnosed by her VA physician Dr. DaCosta with sinusitis and bronchitis. She also consulted an ENT specialist who reportedly recommended surgery.

She and the rest of the family left this home October 14, 2001 secondary to health concerns and findings of mold and moisture problems in this house. Since leaving this house, she also felt much better.

Medications:

Albuterol, Ibuprofen, Baclofen, Clonazepam

Past Medical History:

Rubella 1972, MS 1977, PUD, reflux, esophagitis, rhinosinusitis since early 70s, PTSD in 80s. Allergy to penicillin.

Karen A. Marrone

2

October 21, 2002

Past Surgical History:

Gallbladder surgery 5/2000, hernia repair, cyst removal, laparoscopy.

Social History:

She is a smoker starting at age 15, 1-2 packs per day. She denied any alcohol or significant drug history.

She reported that she now living with her family in Missouri, and that she feels much better there. In this current home there are no known environmental problems.

Physical Examination:

Blood pressure: 120/90 mmHg. Respiratory rate 12/min. Temperature 99.8 T. Height: 5'5". Weight: 131 pounds. Her peak flow was 400 ml. She was coughing during the exam.

Examination of head, ears, nose, throat, chest, abdomen, lungs, and extremities was overall unremarkable. She had problems with line walking and imbalance.

Laboratory Tests:

No reaction to specific IgE and IgG fungal allergens.

Pulmonary function test was not done. Chest x-ray was negative.

Immunological test which included IgG subclasses and lymphocyte enumeration test and function test showed a higher than normal CD4/CD8 ratio and B-lymphocyte cell counts/percentage. The remainder of the testing was normal. These findings are non-specific, but typical after intense fungal exposure.

I reviewed medical records provided to me by various providers. These records did not produce any additional information.

The environmental investigation and report by Mr. R. Pfromm indicated the presence of moisture related fungi and defects inside the house, in particular in the basement. Fungi included species of *Aspergillus*, *Penicillium* and *Stachybotrys*, that were higher inside the house than outside (control). Photos were also provided confirming visible contamination.

Conclusion:

Based on recent findings, I conclude that Mrs. Marrone had an respiratory reaction after intense exposure to mold and mildew in her previous home. She has been diagnosed in addition to her previous medical conditions with upper and lower airway inflammation and irritation effects (Rhinosinusitis, bronchitis). With a reasonable degree of medical

certainty I believe these were the results of the exposure in the described contaminated house. She has been advised that in the future she should avoid any of these moldy indoor exposures and stop smoking. Provided that she has no further exposure to the fungi, she should be reasonably well related to this condition.

Sincerely,

RE: Vida A. Marrone
11673 Highway PT
Dixon, MO 65459
Date of Birth 5/5/84

I reviewed again the visit of Ms. Vida A. Marrone from January 17, 2002. She came accompanied by her parents, who also were examined that day. This is a summary of the findings. I reviewed all provided outside medical reports and environmental findings, including the Advanced Applied Science report from October, 15, 2000.

Ms. Vida Marrone, age 17 years, is a student who works part time as a waitress. She reported that after moving into the house on 354 Timber Rd, Mount Gretna, Pa, she developed a variety of problems including coughing, sore throat, fatigue, skin irritation, headaches and nasal problems. Away from the house (such as her friends' houses) she generally would feel much better. She had been diagnosed by an emergency room doctor with sinusitis and bronchitis.

She left with her family the house on October 14, 2001 secondary to health concerns and findings of mold and moisture problems. Since leaving this house, she also felt much better.

Medications:

None.

Past Medical History:

MVA 2/01 related low back pain.

Past Surgical History:

None

Vida A. Marrone

2

October 21, 2002

Social History:

She is a "very light" smoker (1-5 cigg./day). She denied any alcohol or significant drug history.

She reported that she is now living with her parents in Missouri, and that she feels much better there. In this current home there are no known environmental problems.

Physical Examination:

Blood pressure: 100/60 mmHg. Respiratory rate 12/min. Temperature 98 T. Height: 5'5". Weight: 138 pounds. Her peak flow was 550 ml.

Examination of head, ears, nose, throat, chest, abdomen, lungs, and extremities was overall unremarkable.

Laboratory Tests:

No reaction to specific IgE and IgG fungal allergens. There was a very minimal IgA elevation to *Stachybotrys* specific IgA.

Pulmonary function test and Chest x-ray were not done.

Immunological test which included IgG subclasses and lymphocyte enumeration test and function test showed a higher than normal T and B-lymphocyte cell counts/percentage. The remainder of the testing was normal. These findings are non-specific, but typical after intense fungal exposure and some immune reactivity. Follow up repeat evaluation have been recommended.

I reviewed medical records provided to me by various providers. These records did not produce any additional information.

The environmental investigation and report by Mr. R. Pfromm indicated the presence of moisture related fungi and defects inside the house, in particular in the basement. Fungi included species of *Aspergillus*, *Penicillium* and *Stachybotrys*, that were higher inside the house than outside (control). Photos were also provided confirming visible contamination.

Conclusion:

Based on recent findings, I conclude that Ms. Vida Marrone had also a typical acute respiratory reaction after intense exposure to mold and mildew in her previous home. She has been diagnosed with upper and lower acute airway inflammation and irritation effects (Rhinosinusitis, bronchitis). With a reasonable degree of medical certainty I believe these were the results of the exposure in the described contaminated house. She has been advised that in the future she should avoid any of these moldy indoor exposures and stop

RE: Matthew Marrone
11673 Highway PT
Dixon, MO 65459

Date of Birth 7/29/82

I reviewed again the visit of Matthew Marrone from January 17, 2002. This is a summary of the findings. I reviewed also the environmental findings, including the Advanced Applied Science report from October, 15, 2000.

Matthew Marrone, age 19, is a biology undergraduate student with no prior significant medical history. He reported that after moving into the house on 354 Timber Rd, Mount Gretna, Pa, in August of 1999 he developed shortness of breath, chest tightness, eye irritation, skin lesions under his axillae, excessive fatigue, nasal problems and significant memory loss. After leaving the house he had some improvement. At the time of the visit he was particularly bothered by joint pain in knees, memory problems and fatigue.

Medications:

None.

Past Medical History:

Benign. He denied any other significant abnormalities.

Past Surgical History:

Matthew Marrone

2

October 21, 2002

Social History:

He denied any smoking, alcohol or drug abuse history.

Physical Examination:

Blood pressure: 110/70 mmHg. Respiratory rate 12/min. Temperature normal Height: 5'10". Weight: 163 pounds. His peak flow was found at 450ml.

Examination of head, ears, nose, throat, chest, abdomen, lungs, and extremities was overall unremarkable.

Environmental Exposure:

The environmental investigation and report by Mr. R. Pfromm indicated the presence of moisture related fungi and defects inside the house, in particular in the basement. Fungi included species of *Aspergillus*, *Penicillium* and *Stachybotrys*, that were higher inside the house than outside (control). Photos were also provided confirming visible contamination.

Conclusion:

Mr. Matthew Marrone had a variety of health complaints including respiratory reactions that are in time and place associated with exposure to mold and mildew in his previous home. He has been advised that in the future he should avoid any of these fungal indoor exposures and related problems. He has been discharged for care and follow up by his local physicians. Provided that he has no further exposure to the fungi, he should be reasonably well.

Sincerely,

A handwritten signature in black ink, appearing to read 'E. Johanning', with a stylized flourish at the end.
